

MERGE MESH DRIVERLESS

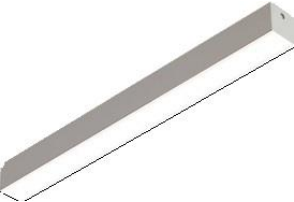

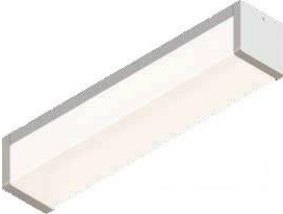

Click on the image to be directed to the Spec Sheet/Warranty

Merge Mesh LED lighting driver, substrate and chip design eliminates the primary cause of product failure – the DC power drivers. Merge Mesh Driver-less fixtures uses AC current to directly power and redundant mesh of LEDs, completely eliminating the need for DC drivers (and all of their drawbacks). The driver-less circuit board and the mesh components are modular and scalable, so they can be adapted for any application and lighting configuration.
